HARKIN ROOFING

NEW ZEALAND

Quick Facts

- Servicing Harkin Roofing, one of the largest commercial roofing companies in the Bay of Plenty, New Zealand.
- Maximising glare control and full visibility, all under the same roof.
- Project installed and supported by HoloPhane Europe's lighting specification partner, Advanced Lighting Technologies.

PARTNER SPOTLIGHT

Holophane Europe's lighting specification partner - Advanced Lighting Technologies, has been providing reliable, leading-edge lighting solutions for over 30 years in New Zealand.

Together with our partner we are delighted that our product portfolio is serving to revolutionise the lighting industry and create the ideal customer solution. Advanced Lighting Technologies have an established business presence with similar core

competencies and value proposition to Holophane Europe, "best customer choice, uniqueness, provider of leading-edge lighting solutions, with a high level of personal service" all of which are paramount to our joint success.

The Harkin Roofing project is an excellent example of the strong partnership between Holophane and Advanced Lighting Technologies delivering the best lighting solutions to customers.

BACKGROUND

Harkin Roofing boasts over 40 years' experience in supplying & installing metal roofing, cladding & accessories. With the daily handling of sheet metals, health and safety is imperative. That is where the PrismaPack™ LED high bay comes in, with market leading glare management and superior light control providing a safe working environment for their staff.

CHALLENGE

Due to the health and safety challenges with this project, the importance of a low-glare luminaire was crucial. This was a highly complex task as their work is very particular, and the handling of different materials and machinery means safety is extremely important. Glare control was a major concern while also delivering high levels of illuminance throughout the factory.

THE SOLUTION

Designed to be distinctively different and taking high bay lighting to new levels of lumen output with superior light control, the PrismaPack™ incorporates PrismaLED technology which delivers a wholly luminous lit effect that accurately controls the output of the LEDs and reduces glare. Additionally, Optimax™ optical technology, maximises performance to deliver a low glare, visually comfortable, efficient lighting system. Harkin Roofing is well respected within the industry in delivering a high standard, so they wanted the best lighting for their employees too.
